CUSTOMIZING SATELLITE SOLUTIONS

Young engineers jobs opportunities in Redu!

Redu Space Services S.A. (RSS) is a Belgian company founded in 2007 by SES TechCom and QINETIQ Space. It was appointed by the European Space Agency (ESA) in order to perform the maintenance & operations of the ESA Centre located in REDU, Belgium.

Redu Space Services (RSS) is a very dynamic company in the space sector, highly specialized in space programmes that involve the **operation and delivery of advanced satellite communication systems and services** with a strong focus on their customization.

RSS employees' have been working for the European Space Agency (ESA), institutional and commercial Customers in the space sector for many years. Based on this relevant experience, our company strategy is focused on key areas in which our knowledge sets us apart from the market and can help our customers in their daily operations and in the development of new solutions and services to meet their stringent challenges.

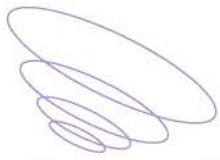

Our strategy is to leverage our services on:

- our significant experience in space, delivering successfully services to our customers,
- the operation and maintenance of the ESA Centre in Redu
- the development of highly secured services for Governments and Institutions
- the continuous collaboration with key partners in space.

The four main areas of work related to our strategy are:

- Enabling solutions and services and associated turn-key projects. ..
- Operations and maintenance of satellite infrastructure.
- In-Orbit Tests campaigns..
- Integrated Applications and downstream services (satellite communications, Earth Observation and Navigation).
